

Metis worked on two projects for the Bainbridge Fire Department. The first involved roof repairs and the removal of the old gutter and fascia above the main garage doors. While repairing the roof, Metis installed new insulation with baffles, new fascia board, aluminum trim, soffit and completed the project with new gutters.

The second project created new spaces implementing a new floor plan. A new ventilation fan was added and a dividing wall was installed in the turn-out gear locker room to separate the space. The electrical and fire alarm components were reworked for safety.
